- This course covers everything you need to know to unlock your camera's full potential. We go over the basic features of digital cameras until you understand what all those buttons actually do. We compare 'full frame' and 'crop sensors' cameras and show you how digital photos are processed into file formats such as '.RAW' and 'jpeg'. We then identify the key parts of a digital single-lens reflex camera (DSLR) and explain how to customize its settings to suit your needs.

### Introduction to HTML and CSS

Alison

HTML is used globally to format web pages and CSS can lend them a certain look and feel. We establish the basics of the language and unpack the use of forms and tables with different HTML attributes. This code is necessary to correctly display text, images and other elements. We demonstrate how to set up a website environment by investigating the structure and format of an HTML document, thus enabling you to use tags and multimedia on your web pages.

### Intermediate Digital Photography

Alison

This online digital photography course explains in detail how shutter speed, aperture, and ISO work individually. You will learn how adjusting one means that one (or both) of the others also need to be adjusted to get the correct exposure. The course will then cover the various types of filters, how they function, and what effects they have when taking photographs. You will also learn everything you need to know about the relationship between focal length, lens diameter, and f-stops.
